

# CARRIES

OST Conference 2016

- ## OBJECTIVES
- ▶ Appreciate challenges to daily continuity of access
  - ▶ Understand specific needs and challenges to community pharmacy care
  - ▶ Learn challenges to in hospital care, including admission and discharge
  - ▶ Explore gaps for clients – release from prison, transfer from other programs

- ## CARRIES - CHAPTER 10
- ▶ Carries are take home doses of methadone or suboxone.
  - ▶ Safety of the patient and the community must be considered before being granted
  - ▶ Patients cannot be granted carries until adequate stability is achieved

- ## STABILITY
- ▶ Based upon a combination of clinical data, urine drug screens and consideration of social, psychological and other circumstances impacting the patient
  - ▶ Some patients may never achieve adequate stability
  - ▶ Carry privileges require evidence of functional progress

- ## FUNCTIONAL PROGRESS
- ▶ Normal urine drug screens
  - ▶ Attendance to appointments
  - ▶ Attendance of treatment programs
  - ▶ Children out of care

- ## OTHER REASONS
- ▶ Medical reasons – COPD, CHF,
  - ▶ Transportation issues
  - ▶ Pharmacy closures

## CARRIES

- ▶ Should not be granted if:
  - ▶ Patient at risk of taking more than prescribed
  - ▶ Patient unable to store safely
  - ▶ Suspicion of diversion
  - ▶ Continued use of potential harmful interacting substances such as alcohol or other CNS depressants such as benzodiazepines

## CARRIES

- ▶ Cannot be granted in the initiation or stabilization phase
- ▶ Carries cannot be granted until the patient has 3 months of negative urine drug screens
- ▶ Any deviation from the Standards and Guidelines requires clear documentation of the rationale

## CARRIES

- ▶ Take home doses must be prescribed incrementally beginning at the rate of 1 or 2 doses per week to a maximum of 6 doses per week
- ▶ All carries must include a witnessed ingestion
- ▶ Carries must be discontinued if there a question of social stability
- ▶ Lost, stolen, spoiled doses may indicate instability

## CARRIES

- ▶ Unstable housing, relapse, diversion, mental health instability and recent incarceration may all be reasons to suspend carries

## APPENDIX M

- ▶ Take Home Dose Agreement
- ▶ Revisit anytime during care

## HOSPITAL CARE

- ▶ Admission to hospital – need to carry on methadone
- ▶ Need to confirm dose, last day dose received
- ▶ PIP is helpful – tells you prescriber and pharmacy – can be helpful in sorting out last dose
- ▶ Methadone needs to be prescribed by a physician with a methadone exemption with privileges in the region/hospital
- ▶ Discharge – need to coordinate any dose changes and ensure patient has a community prescription

## INCARCERATION

- ▶ Methadone should be carried in prison if patient is incarcerated
- ▶ Release – corrections should ensure continuity of methadone in community
- ▶ Dose changes should be relayed to community physician

## CASE 1

26 y.o female – opiate addiction  
 On methadone for 4 months  
 Last 3 months have normal drug screen  
 Attending school – wondering if she can have carries  
 Should she be granted carries?

## TRANSFERS

- ▶ Proper documentation should precede transfers
- ▶ Bridging prescription should be written until patient can be seen by new prescriber

## CASE 1

- ▶ Start with 2 carries per week – preferably not back to back
- ▶ Mondays and Fridays
- ▶ Then as ongoing urine drug screens remain negative can increase up to 1/6

## CASE 1

- ▶ 6 months later she has a slip – she provides urine drug screen is positive for opiates
- ▶ What should we do?
- ▶ Repeat UDS in 1 to 2 weeks – positive again
- ▶ When confronted find out that her boy friend was recently on methadone but had been cut off due to ongoing drug use – he has been drinking her carries – causing her to withdraw and slip

## CASE 2

- ▶ 35 y.o male on methadone for 1 year
- ▶ Never can give more than 2 negative urine screens in a row
- ▶ Slips on crystal meth, cocaine, ritalin.
- ▶ Has an opportunity to work construction – but needs to start work at 8 am before his pharmacy is open
- ▶ Really needs this job – going to lose his home

## CASE 2

- ▶ Options
  - ▶ Grant carries?
  - ▶ Change pharmacies?
  - ▶ Change dosing time?

## CASE 3

- ▶ 58 y.o with endstage COPD
- ▶ On home O2
- ▶ Lives 3 blocks from pharmacy
- ▶ Gets 5 portable O2 tanks per month
- ▶ Daily witness – runs out of O2 by 20<sup>th</sup> of each month
- ▶ Urine drug screens – only 1 in 4 urine screens are negative – usually ritalin
- ▶ Do we grant carries?
